PROFESSIONAL SUMMARY

Software Engineering Technology undergraduate student at Universitas Gadjah Mada with interests in software development, backend engineering, and database design. Experienced in developing REST APIs, designing relational database schemas, and integrating AI services into application projects. Comfortable collaborating in teams, managing project workflows, and taking organizational responsibilities across technical activities, logistics, and communications.

EDUCATION

Universitas Gadjah Mada

Diploma IV in Software Engineering Technology | 2025–Present

TECHNICAL AND PROFESSIONAL SKILLS

Backend Development and Programming: Golang, Laravel, Flask, RESTful APIs, Clean Architecture, Arduino

Databases: PostgreSQL, MySQL, Supabase, Entity Relationship Diagrams (ERD), Database Design

Tools and Platforms: Git, GitHub, DBeaver, pgAdmin 4, Notion, Firebase, Google Gemini API

Management and Organizational Skills: Project Management, Logistics and Inventory Management, Media Documentation and Publication, Team Coordination, Problem-Solving

PROJECTS

GI-Presensi — School Attendance API System

API Designer & Backend Developer | *September 2024–November 2024*

- Developed a school attendance REST API using Golang and Fiber, applying Clean Architecture to separate handlers, use cases, and repositories.
- Designed a PostgreSQL database schema and implemented authentication middleware and password hashing to secure endpoint access.
- **Repository**: https://github.com/MilkyTaaaaa/GI-presensi

MarbotFX — Automation and Management System

Project Manager & Database Designer | *January 2025–March 2025*

- Managed team workflows and sprint planning using Notion to support timely system integration.
- Designed an ERD and relational database architecture for operational data storage.
- Coordinated the integration of a Telegram automation bot with backend services.

PanenIn — AI-Powered Agriculture Application

Backend Developer | *GDGoC Hackathon 2026* | *May 2026*

- Designed an ERD and relational database schema in Supabase and supported synchronization of local SQLite data to the cloud.
- Integrated the Google Gemini API to support agricultural consultations using text analysis and images of pest symptoms.
- Built REST APIs for real-time weather data and configured Firebase Cloud Messaging for scheduled recommendation notifications.
- **Repository**: https://github.com/ggalangswt/Panen-In

SIMONIKA — Hargomulyo Village Attendance System

Backend Developer | September 2026–Present

- Designed an ERD and relational MySQL database schema for attendance records and village government personnel data.
- Developed REST APIs using Laravel, implementing route-protection middleware, Bcrypt password hashing, and request validation.
- Implemented attendance-recording business logic and automated attendance summaries to support accurate administrative reporting.
- **Repository**: https://github.com/MilkyTaaaaa/SIMONIKA

ORGANIZATIONAL EXPERIENCE

Technical Member (Hacker) — Google Developer Groups on Campus (GDGoC), Universitas Gadjah Mada

December 2025–July 2026

- Contributed to technical activities focused on backend engineering, system design, and Google Gemini AI integration.
- Collaborated across teams in technology workshops, group discussions, and digital product prototyping.
- Participated in peer-to-peer learning activities to strengthen software engineering skills.

Media & Information Staff — Gladimula XLIII, Mahasiswa Pecinta Alam Universitas Gadjah Mada

September 2026–Present

- Produced and managed social media publication content and visual documentation of field activities.
- Organized public information distribution and facilitated internal and external committee communications.
- Maintained visual identity consistency and timely publication of event information.

Logistics Inventory Staff — Mahasiswa Pecinta Alam Universitas Gadjah Mada

January 2026–Present

- Managed circulation records for hundreds of outdoor activity equipment items.
- Conducted quality control, preventive maintenance, and equipment condition checks before and after borrowing.
- Improved warehouse organization and logistics arrangements to support equipment mobilization across operational divisions.

Head of Logistics Inventory — Technical Mountaineering Club, SMK Negeri 2 Yogyakarta

August 2022–August 2023

- Led warehouse inventory management, incoming and outgoing item records, and field equipment operations.
- Established equipment storage procedures to minimize the risk of damage and loss.
- Coordinated physical inventory verification and prepared periodic organizational asset accountability reports.

CERTIFICATION

Junior Data Center Technical Support — Badan Nasional Sertifikasi Profesi (BNSP) | 2025
